### **MGA001**

MGA001 is a water-based detergent with a high concentration of active ingredients, with a pH 10. The contaminated material includes gold, silver, brass, nickel, copper, iron and stainless steel.

It is effective in breaking down polishing pastes and removing heavy contamination of oils and fats.

The product is long lasting and can withstand significant amounts of contaminants.

For galvanic use, a second step with a higher pH product is recommended.

There are many areas of use, including jewellery, costume jewellery, mechanical jewellery and eyewear. It is particularly suitable for complicated parts or with small cavities, where detergent residues can damage the product.

It is a biodegradable product at 90% or more.

At normal concentrations of use, it does not irritate the skin, but it is advisable to avoid prolonged contact.

How to use: Temperature 40-60 C - Concentration 2-5% - Time 2-5 minutes.
